2. REPORTS (15 MIN) FROM PREVIOUS MEETING

REPORTS

Felix has done all of his assignments, except for further Achievement work, due to missing resources from other members of the group at this time. This will be resolved asap. The first implementation solution for the dependency presenter problem has been resolved. However, there are a lot of dependencies on the EventBus, making the flow hard to read to the unfamiliar eye. Sorting of lists work as they should and all TaskAdapter dependencies to MainPresenter have been resolved.

Elias has worked on fixing the categories in the navigation drawer. He has done his dependency-separation of TimeCategoryAdapter and LabelCategoryAdapter, and now all dependencies should be fixed. The sorting for a list with a filter has been refactored into a more efficient solution. He has fixed a time bug where the date always was set to some point in January and has also finished up the UML-diagrams.

Johan has prepared the resources for the achievements and also tried working on storing the statistics.
